

Explanatory data memo

This document pertains to the dataset submitted along with the paper “Mobilizing the Young Vote: Direct Mail Voter Guides in the 2015 Chicago Mayoral Election.”

The dataset itself is in Stata (version 13.1) format.

The zip file contains the following:

- the dataset (52,324 observations) “multilevel chicago experiment data-3rd version.dta”
- the analysis do file “analysis-chicago-experiment-4.do”
- the log file “analysis-chicago-experiment-4.log”
- this explanatory memo

Note that the do and log file includes additional analyses not included in the paper itself. Furthermore, the Stata package “outreg2” must be installed in order to produce the output tables in the do file. Executing the do file will reproduce the results presented in the paper. Please note, however, that the location of the dataset (as defined on line 4 of the do file) must be changed to the location of the dataset and that the do file will replace the current log file (see the command on line 6 of the do file).
